

Library Corner – March 2005

Very few Journals have crossed my desk this last month so pickings are a little slim. Yes, I know I should browse the electronic Journals but I find them hard to read and it is not like going to the library. I still managed to find a few interesting papers worth at least a glance:

Internal Medicine Journal, Feb 2005, 35(2)

A discussion about epidemiology.

Does clinical epidemiology have a role in clinical practice? M. Williams p104

Clinical epidemiology: a deconstruction. M. Jelinek. pp104-105

Clinical epidemiology reconstructed. D.A. Campbell. pp106-107

From Bruce Graham came these offerings

Comparative physiology of hypoxic pulmonary hypertension: historical clues from brisket disease. Jann Rhodes J Appl Physiol 2005;98 1092-1100

<http://jap.physiology.org/cgi/content/abstract/98/3/1092?etoc>

Physiological aspects of high-altitude pulmonary edema. Peter Bartsch, Heimo Mairbaurl, Marco Maggiorini, and Erik R, Swenson J, Appl Physiol 2005;98 1101-1110

<http://jap.physiology.org/cgi/content/abstract/98/3/1101?etoc>

There were a couple of issues of *Circulation* in the library that had papers those of us involved in exercise testing should be aware of:

Circulation. 2005; 111:697-716.

AHA Scientific Statement

Recommendations for Blood Pressure Measurement in Humans and Experimental Animals. Part 1: Blood Pressure Measurement in Humans. A statement for professionals from the subcommittee of professional and public education of the American Heart Association council on high blood pressure research. TG Pickering *et al.*

Circulation. 2005; 111:428-434.

Chest compression rates during cardiopulmonary resuscitation are suboptimal. A prospective study during in-hospital cardiac arrest. BS Abella *et al.*

To finish with, a bit of philosophy in Clinical Medicine might also be of interest to some. While the context is Doctors, the message is far more universal.

Personal and professional development: a mind of one's own. Robin Downie, Clin Med 4(4): 332-5, 2004

Happy Browsing until next month,

K
